AMENDMENT TO THE CLAIMS

Please cancel claims 1-25 without prejudice or disclaimer of the subject matter recited therein. Applicants expressly reserve the right to file one or more continuation applications directed to the subject matter recited therein;

Please amend claim 26; and

Please add new claims 27-38:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-25. (Canceled).

26. (Currently Amended) A process of forming a semiconductor structure, comprising:

forming a plurality of high and low density areas of nFETS and pFETs on a substrate, the high density areas exhibiting a gate to gate distance of 130 nanometers or less and the low density areas exhibiting a gate to gate distance of greater than 130 nanometers or greater;

forming a thin compressive film of at least one of Si_xN_y and Si_xON_y in a range of 20 to 50 nanometers in channel regions of the high density areas of pFETs exhibiting a compressive stress of approximately -1400 MPa;

forming a thin tensile film of at least one of Si_xN_y and Si_xON_y in a range of 20 to 50 nanometers in channel regions of the high density areas of nFETs;

P27361.A03 Serial No.: 10/701,526

forming a thick compressive film of at least one of Si_xN_y and Si_xON_y in a range of 50 to 500 nanometers in channel regions of the low density areas of pFETs;

forming a thick tensile film of at least one of Si_xN_y, and Si_xON_y in a range of 50 to 500 nanometers in channel regions of the low density areas of nFETs exhibiting a tensile stress of approximately 700 Mpa,

wherein the forming of the thick tensile film includes providing:

a temperature of approximately 480°C, a pressure of approximately 6.25 Torr, a spacing between the substrate and electrode of 490 mils, and a flow of 300 sccm of 2% dilute SiH₄ gas, 15 sccm NH₃ gas and 1060 sccm N₂ gas using RF power of 340 watts, and

wherein the forming of the thin compressive film includes providing:

a temperature of approximately 480°C, a pressure of approximately 5.75 Torr, a spacing between the wafer and the electrode of 395 mils, and a flow of 3000 sccm of 2% dilute SiH₄ gas, 15 sccm NH₃ gas and 1060 sccm N₂ gas using RF power of 900 watts.

- 27. (New) The process of claim 26, wherein the 20 to 50 nanometer thickness of the thin compressive film does not pose a substantial risk of void formation.
- 28. (New) The process of claim 26, wherein the 20 to 50 nanometer thickness of the thin tensile film does not pose a substantial risk of void formation.
- 29. (New) The process of claim 26, wherein a compressive stress of the thin compressive film enhances performance of the high density areas without materially

P27361.A03 Serial No.: 10/701,526

degrading performance of the low density areas and a tensile stress of the thin tensile film enhances performance of the high density areas without materially degrading performance of the low density areas.

- 30. (New) The process of claim 26, wherein the thin compressive film and the thin tensile film are formed by one of a CVD process, a plasma enhanced CVD process and a PVD process.
- 31. (New) The process of claim 26, wherein the thick compressive film and the thick tensile film are formed by one of a CVD process, a plasma enhanced CVD process and a PVD process.
- 32. (New) The process of claim 26, wherein each of the thin and thick tensile and compressive films are formed by deposition on an SiO₂ liner.
- 33. (New) The process of claim 26, wherein the process produces a tensile stress that enhances electron mobility in the nFETS without materially degrading performance of the pFETS and a compressive stress that enhances hole mobility in the pFETS without materially degrading performance of the nFETS.
 - 34. (New) The process of claim 26, further comprising: removing the thin and thick tensile films from the low density areas; and

P27361.A03 Serial No.: 10/701,526

removing the thin and thick compressive films from the high density areas.

- 35. (New) The process of claim 26, wherein each of the thin and thick compressive films are formed before each of the thin and thick tensile films.
- 36. (New) The process of claim 26, wherein each of the thin and thick tensile films are formed before each of the thin and thick compressive films.
- 37. (New) The process of claim 26, wherein each of the thin compressive and tensile films are formed before each of the thick compressive and tensile films.
- 38. (New) The process of claim 26, wherein each of the thick compressive and tensile films are formed before each of the thin compressive and tensile films.
